

Cyspera Application Instructions

Cyspera is a novel pigment corrector formulated with Cysteamine to address the appearance of discoloration and dark spots. There is a strong scent when the product is applied to the skin. Once the product is removed from the skin the scent dissipates.

Application Instructions:

Intensive Phase:

Once per day for 16 weeks

Maintenance Phase:

Once per day, twice weekly

1. Do not wash the skin before application. If necessary to wash, wait one hour before application of creme.
2. Apply a thin layer on the skin. Leave on the skin for 15 minutes (a warming sensation or mild tingling may occur and last up to 30 minutes).
3. Remove by washing area with a gentle cleanser. Gently pat area dry.
4. Apply moisturizer. Maintain skin hydration during the day.
