

Hyaluronidase Post Care Instructions

1. Massage the treated area regularly for several days to improve circulation and tissue viability.
2. Watch the area for signs of infection, or necrosis (pain, swelling, warm to the touch, discoloration of the area treated). If you have any of these symptoms please call your provider immediately.
3. Please be aware that it can take up to 14 days for the final results to be seen and the treatment may need to be repeated.

If you have questions or concerns regarding your treatment
please call the office at 303-532-2810.
